

# Azure Site Recovery - High churn support

## Private preview of Azure-to-Azure DR

## Key enhancements in preview

- Suitable for high-I/O workloads like databases
- Increased churn limit of 50MBps/disk & 100MBps/VM
- Automatically process the high churning disk on new & improved ASR offering

## Requirements for preview

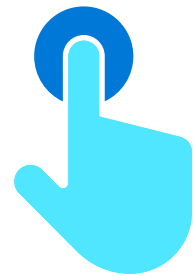

- Only for source VMs in Azure (not yet available for on-premises VMs)
- Source VM should have a minimum of 4 vCPU and 16GiB Memory
- Source disk should be premium managed disk P20 or greater

# Steps

- Sign-up for preview & provide your subscription for whitelisting
- ASR team will reach out with documentation & steps (closer to preview date)
- Deploy high churning VM (non-production) and evaluate the enhanced offering
- Provide feedback
